Recruitment Officer
Google - Chrome
Los Angeles, CA

Dear Recruiter,

This letter is with regards to the job opportunity "Software Engineer - Chrome" that Google Labs has to offer. I came accross this opportunity when I was searching for jobs in LinkedIn and I found it to be a very good match with my skills and I feel I could be a good fit.

I have been working in IBM for the past 4 years and 8 months. I have been developing applications for AT&T client. The primary development language has been C++. I am well versed with Object Oriented Programming concepts and have designed and developed end to end systems. The application that I have been working on has a large C++ code base which involes multi-threaded programming, STL usage and numerous data structures. I have a good understanding of SQL databases, as the project involves millions of database transactions in large scale systems with query optimization being a key factor. I have also written scripts in bash which helps analyze and debug the code base more efficiently.

I am a passionate programmer and this has been shown in the numerous awards that I received as a software developer in IBM.

I look forward for an opportunity to demonstrate my abilities and would be eager to hear from you. I could be contacted either by mail - manasa.mahesh7@gmail.com or by phone - (732)-210-8297. Thank you for your patience and time to consider my candidacy for this opportunity.

Sincerely yours,

Manasa Mahesh
